## Technical Data

### APPLICATION RATE

1 quart to 5 gallons of sealer

### Appearance:

Fine white powder

### Packaging:

Wide mouth quart jar

### PRECAUTIONS

Treat as nuisance dust hazard until suspended in sealer.

### WARRANTY

Warranty of this product, when used according to the directions, is limited to refund of purchase price, or replacement of product (if defective), at manufacturer's/seller's option. SureCrete Design Products shall not be liable for cost of labor or direct and/or incidental consequential damages.

### DESCRIPTION

*SureGrip Additive* is a premium grade polypropylene in a micronized fine texture. It consistently out performs other slip resistant additives in durability, due to its inherent crush resistance. The almost spherical shape of *SureGrip Additive* will also impart a smoother "feel" than most other slip resistant additives.

Low density and insolubility characteristics reduce or eliminate settling when blending into all of *SureCrete's* sealers.

*SureGrip Additive* is available in two different particle sizes, medium and fine. **Heavy-Duty** = 840 microns or 20 mesh. **Regular** = 300 microns or 50 mesh.

### USE

*SureGrip Additive* creates a uniform slip resistant surface on any sealed surface. Its low density allows the product to stay suspended in the sealer after mixing. The smoother, nearly spherical texture is easy to clean and provides a smoother feel to bare foot traffic, especially for pool decks and patios. *SureGrip Additive* also serves to tone down the sheen produced in high gloss sealers.

### APPLICATION

*SureGrip Additive* is ordinarily mixed into the sealer and applied normally with no additional steps required. Some contractors elect to broadcast it between coats of sealer on a deck surface.
